

Security And Emergency Lighting

Tavcom Certificate

Course Overview

This Tavcom certified Security and Emergency Lighting training course consists of 8 modules and is aimed at anyone involved in designing CCTV systems that have a lighting requirement.

The provision of supplementary lighting is essential to ensure that a CCTV system can capture high-quality images day or night, and yet it is a major component of a security solution which is quite often overlooked. Specifying the correct lighting at an early stage of a project's lifecycle will ensure that time-consuming return to site visits can be avoided at a later stage.

What will you learn?

- The fundamentals of light including frequency and wavelength
- Light pollution and energy management
- Where light should be measured for CCTV cameras
- Legislation, codes of practice and governing bodies
- Perimeter, high security and commercial lighting
- System integration
- Emergency lighting
- Automated intelligent lighting systems and photocells
