

Technical Surveillance Counter Measures For Security Managers - Online

IQ Level 4

Why this course?

This course has been written by the Technical Surveillance Counter Measures Institute, currently the only TSCM practitioners' trade body in existence, with members located throughout the world

Against the backdrop of a significantly increased threat to intellectual property, information and data, the Technical Surveillance Counter Measures Institute (TSCMi) has developed this unique online course.

This course has been developed to meet the significantly increased threats to IP, information and data.

The course will show how effective countermeasures can be identified and applied to mitigate the very real threat of unauthorised surveillance and 'industrial espionage'.

Who will benefit?

The course will be of immediate benefit to Security Directors and Managers with responsibility for developing and implementing security strategy including: the protection of intellectual property, information assets, reputation and people. Learners will discover who is using this technology and why, how to detail the threat in your corporate risk register and how to engage professional TSCM support to assist in combating the threat.

Core content

- Principles of Technical Surveillance
- Principles of Technical Counter Measures & Threat Mitigation
- Principles of Threat & Risk Analysis in the Context of Technical Surveillance
- The Role of Technical Surveillance Counter Measures Consultants

How is it Assessed?

Assessment is via a 2000 word written assignment per module.
